

Presentation

Gulf Computers Provide premium quality services in three areas:

- UNIX and Linux system administration and technical support
- Network engineering and technical support
- UNIX and Linux security.

We have over 15 years of experience in supporting all flavors of UNIX and Linux, and solving complex UNIX and Linux and internetworking problems. We can provide onsite service as well as remote technical support through our around-the-clock call center.

UNIX and Linux System Administration

Gulf Computers provide a range of UNIX and Linux administration and support services, including onsite system administrators, remote system administration, 24/7 technical support through our call center. We have experience supporting many flavors of UNIX, including Sun Solaris, IBM AIX, SGI Irix, SCO and Linux. We can install, configure, tune, and troubleshoot UNIX and Linux systems and a wide variety of applications such as web servers, mail servers, SQL databases, domain name services, directory services, and backup solutions.

Network Engineering and Support

Gulf Computers provide LAN and WAN design, installation and support services. We have experience in designing, installing, configuring, and troubleshooting network equipment. We work primarily with Cisco equipment on such issues as inter-networking and Internet connectivity, load-balancing, VPNs, performance optimization, and troubleshooting. We can provide onsite setup and support as well as 24/7 technical assistance.

UNIX and Linux Network Security

Gulf Computers provide a full range of UNIX and Linux network security services, including security assessments, vulnerability and penetration testing, patching and securing individual systems, overall network security planning, incident response, and disaster recovery. We have extensive experience with installation and configuration of firewalls.
